

How Real Estate Agents Are Actually Using AI in 2026

A practical, compliance-first playbook for licensed professionals.

John Palmer | Founder, GetAI Academy™

Ground Rules for Licensed Professionals

	What this IS
	Practical workflow
	Focused on Fair Housing & MLS compliance
	Broker-legible structures

	What this IS NOT
	Tool tutorials
	Speed hacks
	Replacements for human judgment

THE CORE LAW: Every AI output is a draft requiring human review.

The Unmanaged Risk in Real Estate AI

The Current State:

- Ad-hoc pasting of partial property notes into AI tools.
- Zero defined workflow or standardized review steps.
- Process remains completely invisible to the broker.
- Publishes unknown liability exposure directly to clients or MLS.

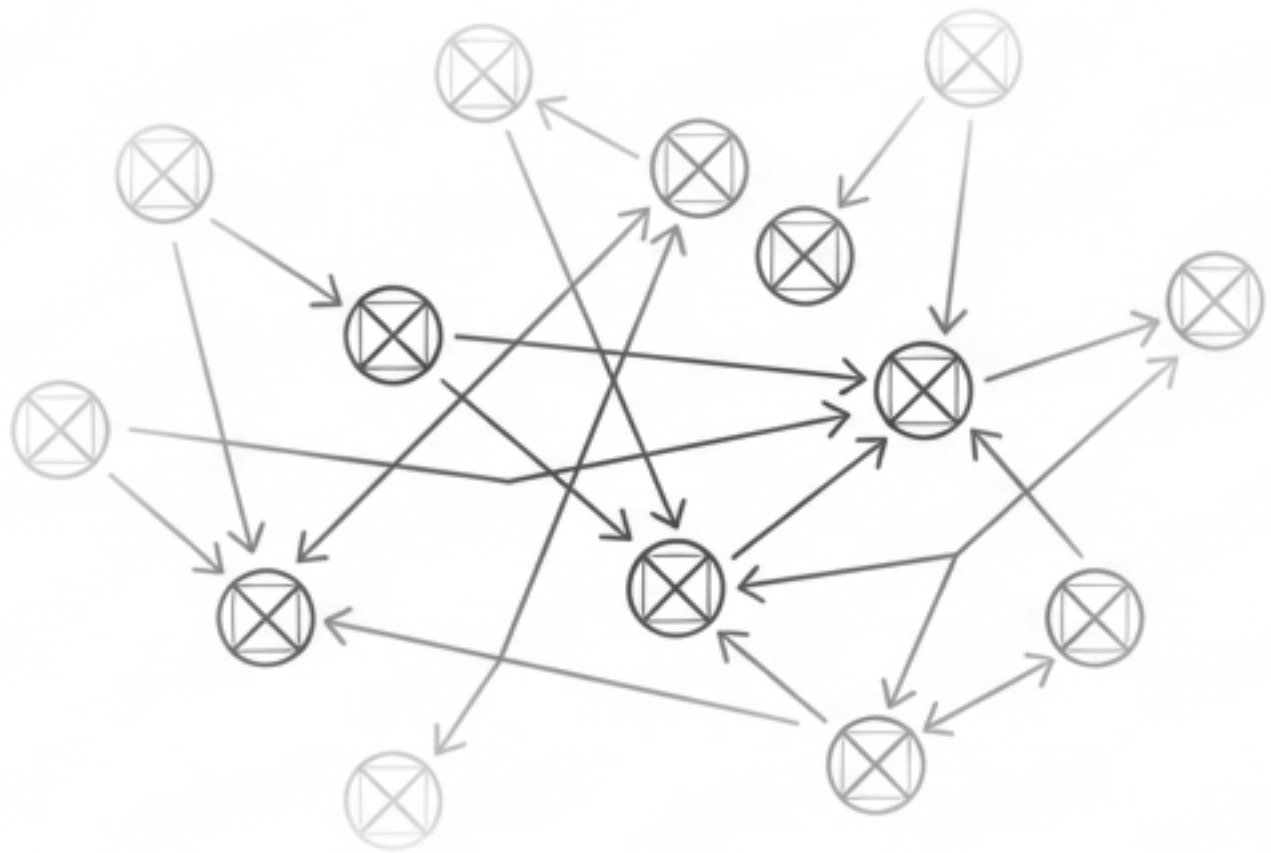

From Experimentation to Structured Adoption

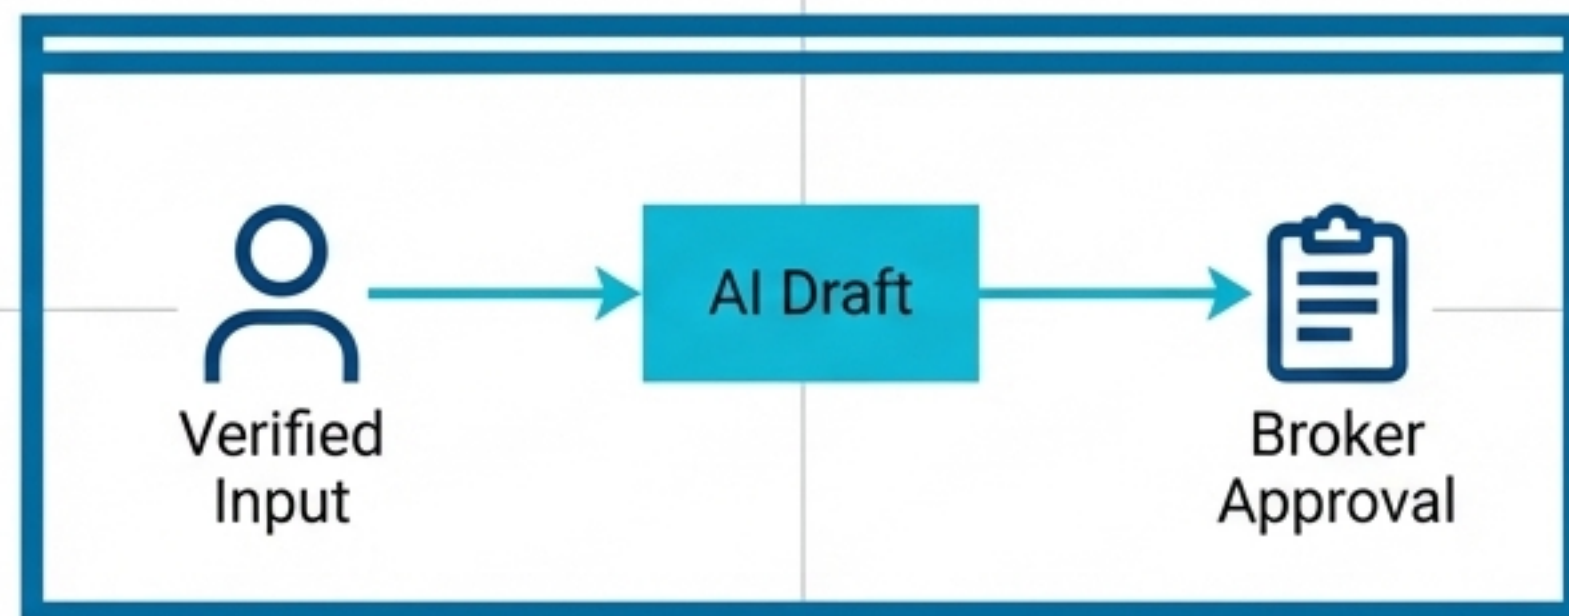

The Shift: Moving from invisible, unorganized tasks to documented, repeatable workflows.

The Reality: The specific AI tool is secondary; the framework around it is everything.

2023: Informal

2026: Structured Adoption

The AI Risk Spectrum in Real Estate

The risk is not the AI tool itself; it is the absence of a defined review step.

Low Risk / Safe Start	High Risk / Needs Framework	Never Use
<p>Internal research</p> <p>Communication templates</p> <p>Admin workflows</p>	<p>Listing descriptions</p> <p>Client-facing commentary</p> <p>(Requires structured review)</p>	<p>Disclosure documents</p> <p>Offer/contract language</p>

The Three AI Compliance Blindspots

Fair Housing

Generates accidental demographic descriptors.

~~"ideal for young professionals"~~

Blind Hallucinations

Fills incomplete inputs with assumed, unverified amenities.

~~"sun-drenched rooms"~~

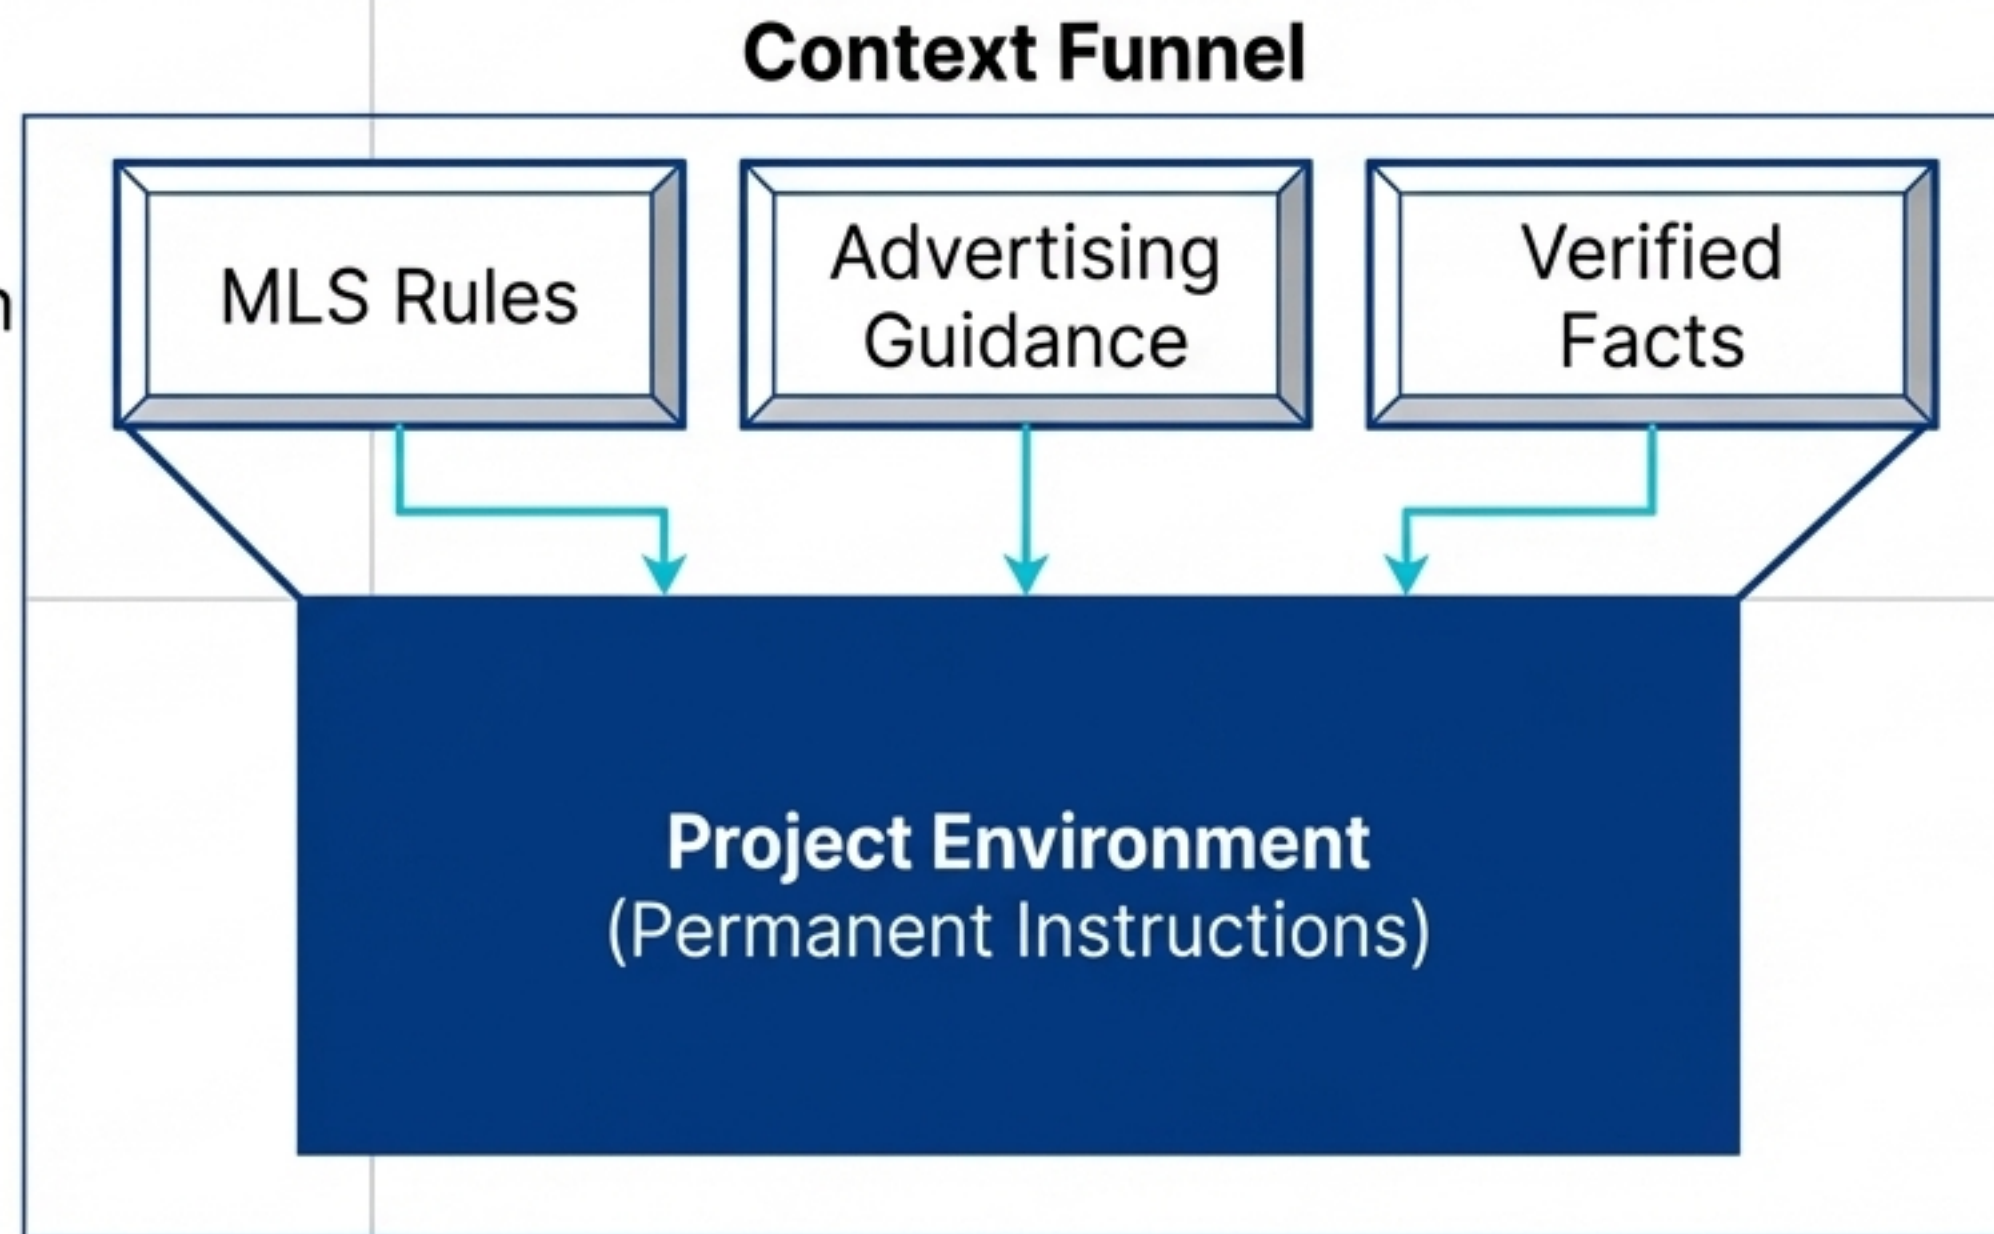

Regulatory Rules

Ignorant of MLS character limits, restricted terms, and NJREC/HUD guidance.

~~"perfect for entertaining"~~

The 4-Step Architecture for Safe AI

- 1. Create a Project:** Permanently store instructions in ChatGPT/Claude.
- 2. Upload MLS Rules:** Paste public remarks policies and state advertising guidance.
- 3. Type Manual Notes:** Input only verified facts (beds, baths, confirmed features).

4. Never Paste URLs: AI cannot reliably read Zillow/Realtor.com and will invent facts.

Prompt Engineering for Compliance

Guardrail instructions are not an afterthought; they are the foundation of the prompt.

Unmanaged Prompt

Write a listing description for 123 Main Street, 4 bed 2 bath. Make it sound great.

 Missing context leads to hallucinations and Fair Housing risks.

Compliance-Safe Prompt

You are a licensed real estate writing assistant.

COMPLIANCE RULES:

- Avoid demographic descriptors
- No neighborhood quality claims
- Focus ONLY on verified facts

[Paste verified property notes here]

The Structured Publication Workflow

AI generates the starting point. Every step after that relies on your professional license and judgment.

The Pre-Publication Checklist

1. Verify every fact against source data.

2. Remove explicit or implied demographic language.

3. Audit for assumptions AI made without input.

4. Flag and rewrite unverifiable superlatives (“won’t last”).

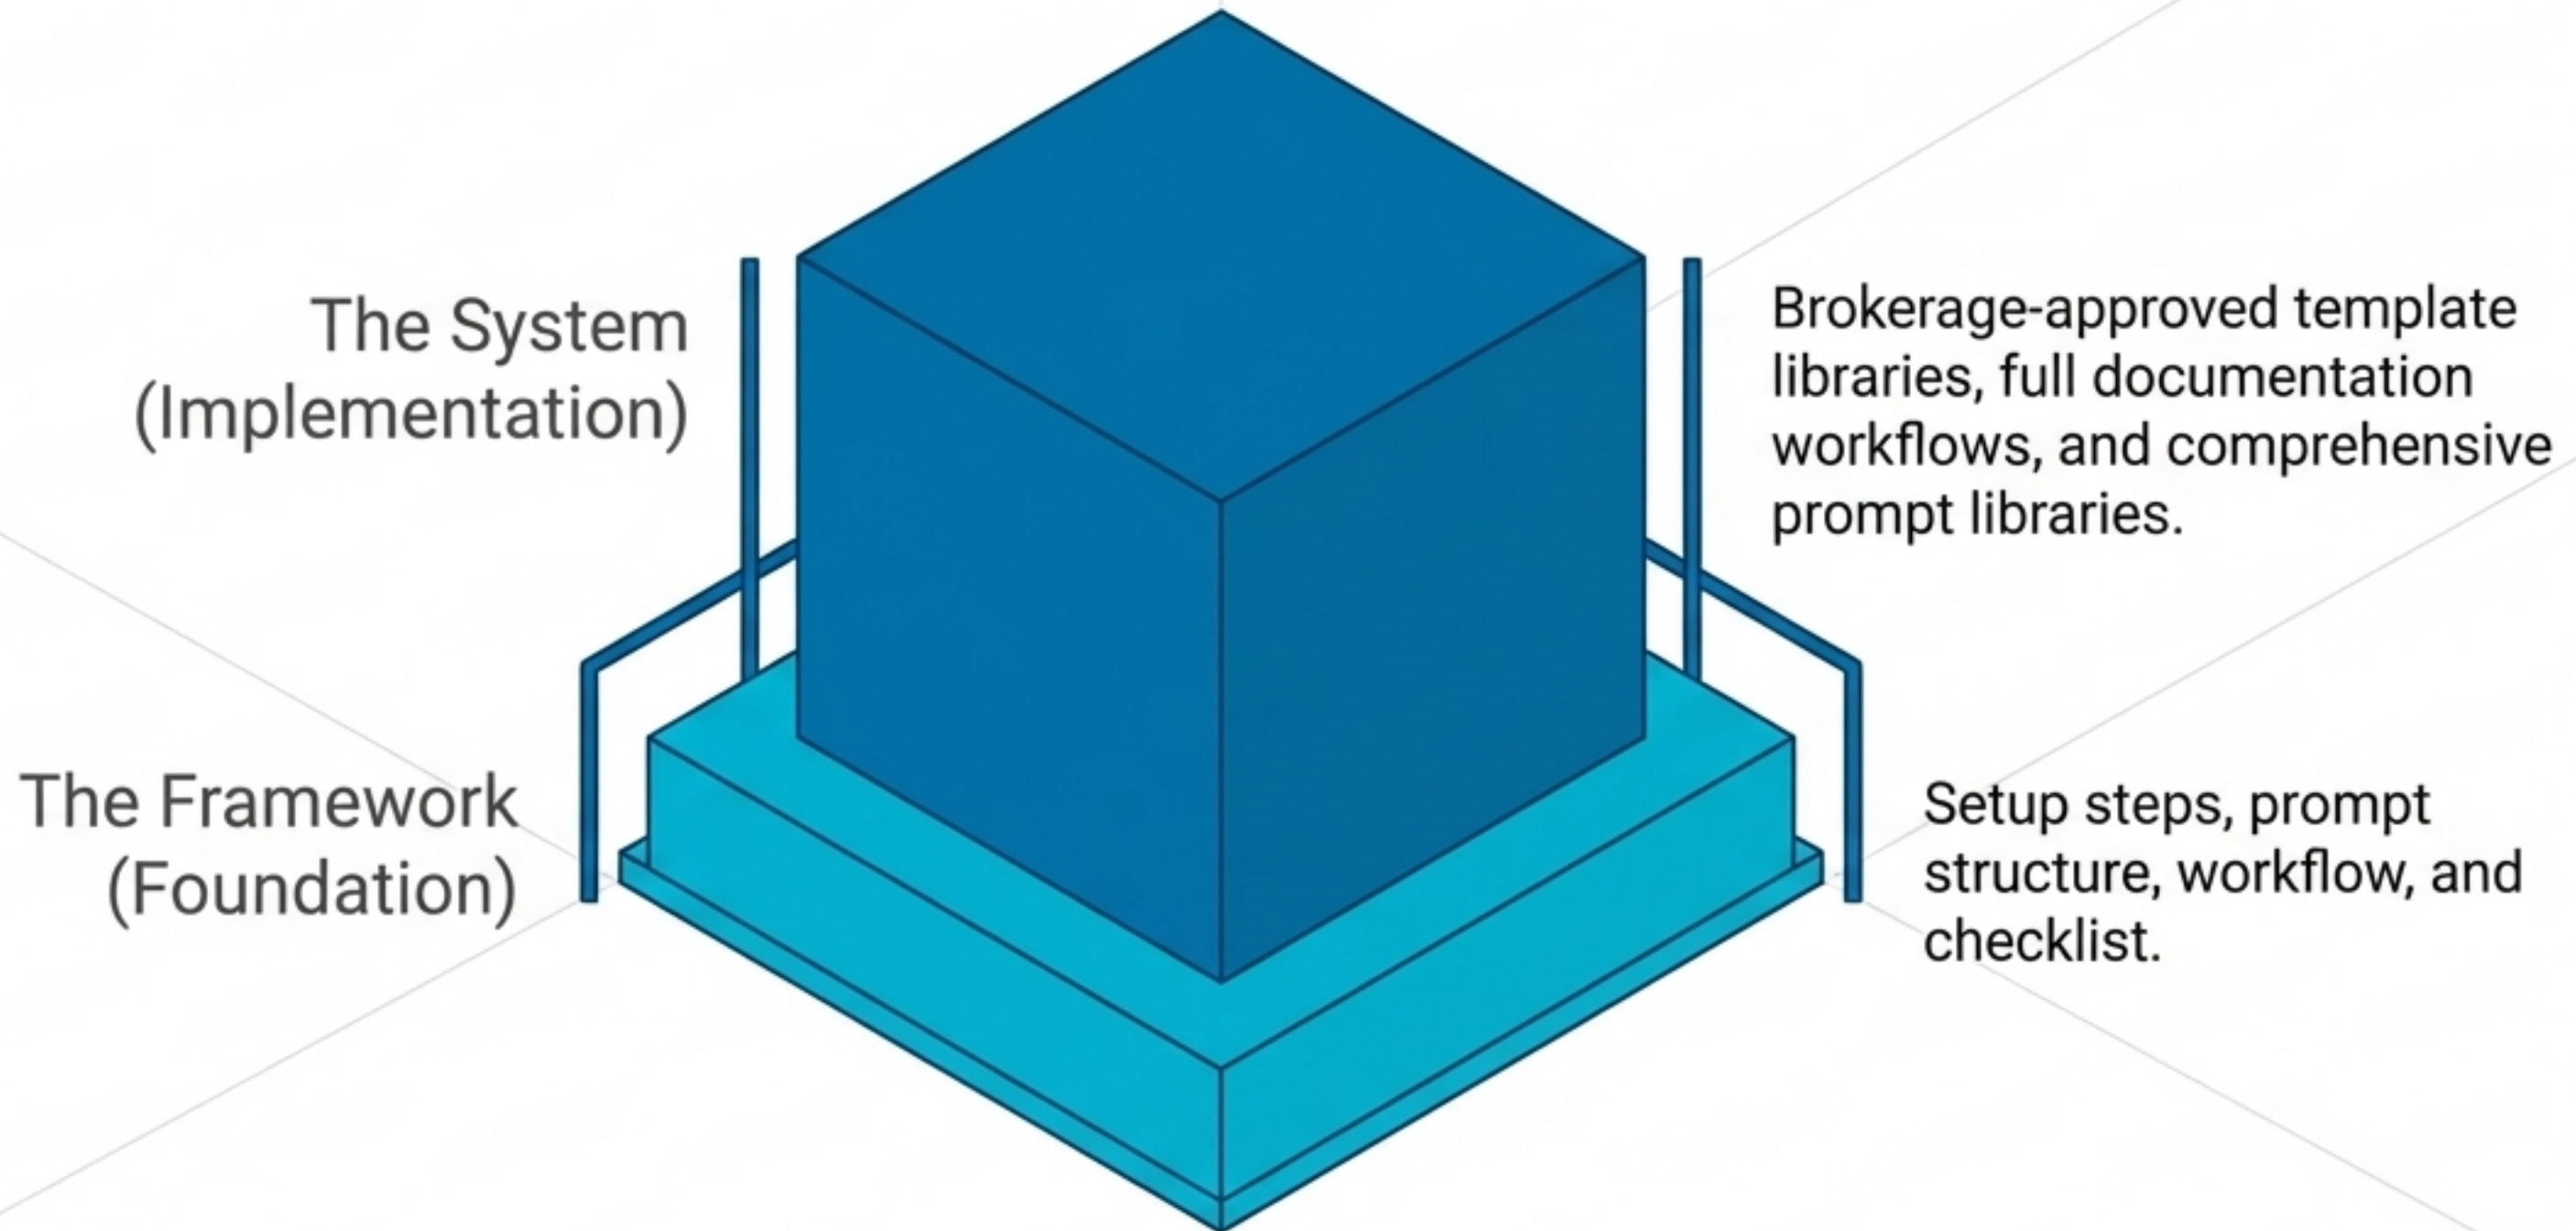

6. Read aloud as the buyer’s agent.

5. Confirm MLS field compliance (character limits).

7. Secure documented broker sign-off.

Building the Foundation vs. The System

Your Immediate Next Step: The Playbook

- 5 Compliance-Safe Prompts (Listings, Follow-Up, Social, Market Update).
- The universal AI Compliance Checker prompt.
- The 7-point pre-publication checklist.
- Safe vs. Unsafe language reference table.
